How do you play a Breakout EDU Digital game?

Navigate to the game page and begin looking for clues. Click on everything possible. If you see something clickable, it's worth a look. Other clue types include bolded letters, Google Apps documents, invisible text, and whatever else we can come up with! The games require critical thinking and will not always be completely straightforward. Additionally, some clues may try to trick you.

What do I need to play?

All you need is an internet connection and a device! Our Breakout EDU Digital games are best played on a laptop or Chromebook, but can also be completed on iPads, tablets, or even phones. Some teachers project the game in their classroom for a whole class experience. It may also be helpful to have scratch paper.

What size group do you recommend for playing Breakout EDU Digital games?

Participants can play individually, in small groups, or as a whole class. Each participant could have their own device or share one.

How do I know when an answer is correct?

When an answer is correct, the box on the Form will no longer be outlined in red, and the red error text will disappear. You must have all the lock answers correct before you can move on to the second part of the form to receive your badge.

How do I get a hint?

We have a hint hub hidden in plain sight on every page. Look carefully! Speaking in multiple languages is always a valued skill.
